

PLATFORM OPTIONS

Operator platforms optimize the worker position in relation to the box wall. Two platform widths accommodate different handling operations. Contact a Destuff-IT™ Technical Sales person for assistance in determining what width is best for your application.

PLATFORM SPECIFICATIONS:

Capacity: 250 kg (550 lb)

Height: Maximum 660 mm (26 in) from floor

Height: Minimum 148 mm (5.75 in) from floor

Length: 2057 mm (6.75 ft)

BENEFITS of 559 mm (22 in) WIDE PLATFORM:

- Allows for pivoting conveyor to come near the box wall. This is helpful for heavy and large product and allows sliding rather than lifting of product.
- Floor-loaded product can be tipped onto the conveyor belt allowing the belt to do the heavy work of lifting and carrying.

BENEFITS OF 838 mm (33 in) WIDE PLATFORM

- Allows operator(s) to walk around the end of the pivoting conveyor.
- Most useful for small light weight boxes and for loading applications.
